D0000C00010 - Site Feasibility Documentation

Osimertinib (AZD-1001) - Phase II - Stage III unresectable EGFR-mutated NSCLC

SYNTHETIC DOCUMENT. Created for Snowflake hands-on lab purposes. All sites, investigators, study codes and responses are fictional.

Core Information

Salutation Dr.

First Name Meera

Last Name Raghavan

Institution/Practice/Clinic Name Bengaluru Advanced Cancer Centre

Town/City Bengaluru

Country India

Site Reference SITE_002

Office Email Address meera.raghavan@site_002.example.org

Which of the following best describes your primary therapeutic area of specialty?

NSCLC

Is the Principal Investigator or other designee completing this survey?

PI

Patient Population and Recruitment

1. How many patients with Stage III unresectable EGFR-mutated NSCLC do you see at your site per year?

22

2. Based on the inclusion and exclusion criteria, how many patients do you estimate you can screen and enrol into this study?

Patients screened per year: 14

Patients enrolled per year: 8

3. How many ongoing or future studies would compete for this patient population?

2

4. What is the estimated duration, in weeks, from receipt of the final protocol to first patient in?

6

Study Assessments

5. Would the requirement for FDG-PET at screening be a challenge for your site?

Yes

Site Capabilities

6. What testing capabilities and equipment does your site have?

The following are available at this site:

12 Lead ECG
CT scan
Local EGFR Mutation Testing
Plasma Sampling
Centrifuge
-20 degree freezer
Sample Shipping
Drug/Device Storage
Ultrasound
On-site Pharmacy
Document Archive

Local Laboratory

7. Which local lab type will you be using?

On-site Lab: Inside the institution

8. Does your facility have an on-site certified local lab?

Yes

9. Does your lab have a dedicated place to store patient samples?

Yes

Additional Comments

10. Please add any further comments on the protocol or screening thresholds.

Our site does not currently have fdg pet available on site. We would need to refer to a third party facility, which may extend the screening window beyond the protocol requirement.
