D0000C00030 - Site Feasibility Documentation

Cardixalin (AZD-6006) - Phase III - Transthyretin amyloid cardiomyopathy

SYNTHETIC DOCUMENT. Created for Snowflake hands-on lab purposes. All sites, investigators, study codes and responses are fictional.

Core Information

Salutation Dr.

First Name Carlos

Last Name Mendez

Institution/Practice/Clinic Name Hospital Cardiologico de Barcelona

Town/City Barcelona

Country Spain

Site Reference SITE_006

Office Email Address carlos.mendez@site_006.example.org

Which of the following best describes your primary therapeutic area of specialty?

ATTR-CM

Is the Principal Investigator or other designee completing this survey?

PI

Patient Population and Recruitment

1. How many patients with Transthyretin amyloid cardiomyopathy do you see at your site per year?

25

2. Based on the inclusion and exclusion criteria, how many patients do you estimate you can screen and enrol into this study?

Patients screened per year: 15

Patients enrolled per year: 9

3. How many ongoing or future studies would compete for this patient population?

2

4. What is the estimated duration, in weeks, from receipt of the final protocol to first patient in?

12

Study Assessments

5. Would the cardiac imaging frequency described above be a challenge for your site?

No

Site Capabilities

6. What testing capabilities and equipment does your site have?

The following are available at this site:

12 Lead ECG
Echocardiogram (ECHO)
Cardiac MRI scan
NT-proBNP blood testing
Genetic Testing
Plasma Sampling
Centrifuge
-70°C Freezer
Ultrasound
X-Ray
On-site Pharmacy
Document Archive

Local Laboratory

7. Which local lab type will you be using?

On-site Lab: Inside the institution

8. Does your facility have an on-site certified local lab?

Yes

9. Does your lab have a dedicated place to store patient samples?

Yes

Additional Comments

10. Please add any further comments on the protocol or screening thresholds.

Our site does not currently have cardiac pyp available on site. We would need to refer to a third party facility, which may extend the screening window beyond the protocol requirement.
