D0000C00050 - Site Feasibility Documentation

Respirex (AZD-7007) - Phase III - Moderate to severe COPD

SYNTHETIC DOCUMENT. Created for Snowflake hands-on lab purposes. All sites, investigators, study codes and responses are fictional.

Core Information

Salutation Dr.

First Name Rohit

Last Name Malhotra

Institution/Practice/Clinic Name New Delhi Institute of Respiratory Health

Town/City New Delhi

Country India

Site Reference SITE_009

Office Email Address rohit.malhotra@site_009.example.org

Which of the following best describes your primary therapeutic area of specialty?

COPD

Is the Principal Investigator or other designee completing this survey?

PI

Patient Population and Recruitment

1. How many patients with Moderate to severe COPD do you see at your site per year?

45

2. Based on the inclusion and exclusion criteria, how many patients do you estimate you can screen and enrol into this study?

Patients screened per year: 30

Patients enrolled per year: 20

3. How many ongoing or future studies would compete for this patient population?

2

4. What is the estimated duration, in weeks, from receipt of the final protocol to first patient in?

6

Study Assessments

5. Would the spirometry quality requirements be difficult for your site to meet?

No

Site Capabilities

6. What testing capabilities and equipment does your site have? Please tick every item available at your site.

- ☒ Spirometry
- ☒ 12 Lead ECG
- ☐ X-Ray
- ☒ Whole Blood Sampling (Ambient)
- ☒ Centrifuge
- ☒ Refrigerated Sample Storage
- ☒ eCOA Device
- ☒ Urinalysis
- ☒ Offsite pharmacy

Local Laboratory

7. Which local lab type will you be using?

On-site Lab: Inside the institution

8. Does your facility have an on-site certified local lab?

Yes

9. Does your lab have a dedicated place to store patient samples?

Yes

Additional Comments

10. Please add any further comments on the protocol or screening thresholds.

Our site does not currently have x-ray available on site. We would need to refer to a third party facility, which may extend the screening window beyond the protocol requirement.
