D0000C00060 - Site Feasibility Documentation

Soliduzinib (AZD-8008) - Phase I - Advanced solid tumours

SYNTHETIC DOCUMENT. Created for Snowflake hands-on lab purposes. All sites, investigators, study codes and responses are fictional.

Core Information

Salutation Dr.

First Name Emily

Last Name Chen

Institution/Practice/Clinic Name Toronto Metropolitan Cancer Institute

Town/City Toronto

Country Canada

Site Reference SITE_010

Office Email Address emily.chen@site_010.example.org

Which of the following best describes your primary therapeutic area of specialty?

Solid Tumours

Is the Principal Investigator or other designee completing this survey?

PI

Patient Population and Recruitment

1. How many patients with Advanced solid tumours do you see at your site per year?

19

2. Based on the inclusion and exclusion criteria, how many patients do you estimate you can screen and enrol into this study?

Patients screened per year: 12

Patients enrolled per year: 7

3. How many ongoing or future studies would compete for this patient population?

4

4. What is the estimated duration, in weeks, from receipt of the final protocol to first patient in?

13

Study Assessments

5. Can your site perform bone marrow biopsy on site?

No

Site Capabilities

6. What testing capabilities and equipment does your site have? Please tick every item available at your site.

- ☒ CT scan
- ☒ Echocardiogram (ECHO)
- ☒ Tumor biopsy
- ☐ Marrow biopsy
- ☒ Plasma Sampling
- ☒ Serum sample (frozen)
- ☒ Centrifuge
- ☒ -70°C Freezer
- ☐ Temperature-Monitored Storage
- ☒ X-Ray
- ☒ PET
- ☒ On-site Pharmacy
- ☒ Document Archive

Local Laboratory

7. Which local lab type will you be using?

On-site Lab: Inside the institution

8. Does your facility have an on-site certified local lab?

Yes

9. Does your lab have a dedicated place to store patient samples?

Yes

Additional Comments

10. Please add any further comments on the protocol or screening thresholds.

Our site does not currently have marrow biopsy available on site. We would need to refer to a third party facility, which may extend the screening window beyond the protocol requirement.
